Cisco® Software Defined Access and ISE Integration for Policy Deployment and Enforcement (SDAISE) / 3395 EUR / Days: 3

There are many challenges today in managing the network because of manual configuration and fragmented tool offerings. Manual operations are slow and error-prone and these issues will be exacerbated due to the constantly changing environment with more users, devices and applications. With the growth of users and different devices types coming into the network, it is more complex to configure user credentials and maintain a consistent policy across the network. If your policy is not consistent, there is the added complexity of maintaining separate policies between wired and wireless. As users move around the network, it also becomes difficult to locate users and troubleshoot issues. The bottom line is that the networks of today do not address today's network needs. This SDA course addresses these issues. Software-Defined Access (SD-Access) is the industry's first intent-based networking solution for the Enterprise built on the principles of Cisco's Digital Network Architecture (DNA). SD-Access provides automated end-to-end segmentation to separate user, device and application traffic without redesigning the network. SD-Access automates user access policy so organizations can make sure the right policies are established for any user or device with any application across the network. This is accomplished with a single network fabric across LAN and WLAN which creates a consistent user experience anywhere without compromising on security.

Getting Started with React | Introduction to React Basics (TT4190) / 1995 EUR / Days: 3

Introduction to React | React Basics is a three-day hands-on course designed to get students quickly up and running with Core React skills. Geared for more experienced web developers new to React, this course provides students with the core knowledge and hands-on skills they require to build reliable, powerful React apps.

Throughout the course students will explore React fundamentals with a progressive, example-driven approach. You'll create your first apps, learn how to write components, start handling user interaction, and manage rich forms. We end the first part by exploring the inner workings of Create React App (Facebook's tool for running React apps), and building a multi-page app that uses client-side routing.

Every project in this course was built using Create React App. Create React App is based on Webpack, a tool which helps process and bundle our various JavaScript, CSS, HTML, and image files. We explore Create React App in-depth in the module "Using Webpack with Create React App." Students will build Single Page Applications (SPA), create robust routing with error handling, and both class and functional reusable components. The lab project will also include the use of form validation.

NOTE: This is a foundational course that explores how to build your first React application. Students who want a deeper dive, with more intermediate level topics such as Redux, REST, Unit Testing and more might consider the TT4195 Mastering React five-day superser of this class as an alternative.

Mastering React | React Foundation (TT4195) / 2595 EUR / Days: 5

Mastering React is a comprehensive hands-on course that aims to be the single most useful resource on getting up to speed quickly with React. Geared for more experienced web developers new to React, this course provides students with the core knowledge and hands-on skills they require to build reliable, powerful React apps. After the first few modules, you'll have a solid understanding of React's fundamentals and will be able to build a wide array of rich, interactive web apps with the framework. The first module is an introduction to the new functionality in ECMAScript 6 (JavaScript). Client-side routing between pages, managing complex state, and heavy API interaction at scale are also covered. This course consists of two parts. In the first part of the course students will explore all the fundamentals with a progressive, example-driven approach. You'll create your first apps, learn how to write components, start handling user interaction, and manage rich forms. We end the first part by exploring the inner workings of Create React App (Facebook's tool for running React apps), writing automated unit tests, and building a multi-page app that uses client-side routing. The latter part of the course moves into more advanced concepts that you'll see used in large, production applications. These concepts explore strategies for data architecture, transport, and management: Redux is a state management paradigm based on the Flux architecture. Redux provides a structure for large state trees and allows you to decouple user interaction in your app from state changes. GraphQL is a powerful, typed, REST API alternative where the client describes the data it needs. Hooks is the powerful, new way to maintain state and properties with functional components and the future of React according to Facebook.

The final portion of this course builds on the previously learned mechanics for building defenses by exploring how design and analysis can be used to build stronger applications from the beginning of the software lifecycle. The Secure Web Application Development Overview is geared for web developers and technical stakeholders who need to produce secure web applications, integrating security measures into the development process from requirements to deployment and maintenance. This overview-level course explores core concepts and challenges in web application security, showcasing current, real world examples that illustrate the potential consequences of not following these best practices.
